

- Hadoop Document
  - Elaborate on user deployment.
    - Add more than provided scripts
    - Explain that master node means Hadoop
    - Explain that the script will create and launch the new instances
    - How are we going to manage quotas?
    - Tenanting?
      - Per person?
      - Limit resources per team?
- Midterm
  - Talk about what OpenStack is.
  - Talk about IBM
  - What our scope is
  - Go through a use case
  - Deploy an instance
  - Show the capabilities
    - Can snapshot
    - Can destroy it
  - Anything where we can actually use the system
    - While an instance is being deployed, talk about what's going on behind the scenes. Talk about the different components.
  - Include what's next and what it means for an end user
