

Update on Status

- Environments
 - Devstack on storage
 - Devstack on controller
 - OpenStack Grizzly on physical hardware

Quantum Configurations - Cesar and John

- Should use eth1 for adapter in promiscuous mode
- “[A new agent management approach for quantum in openstack grizzly](#)”
- <http://irc.freeorg.net>
 - Might want to try this for configuration problems
- Add another NIC to each compute node
- Switch to using GRE tunnels

Hadoop - Jack

- This way we'll know what tweaks need to be made to the environment
- Stores all data in an ephemeral disk
 - Nothing we need to actually do from a storage standpoint
 - This data will come in from a URL

Hadoop Data - John

- Get real data from professors to run in Hadoop environment.
- Include everything so that we can just run it.
- How to tie the parameters into a Heat job.

Heat - Justin

- How to use Heat CLI to put the Hadoop configuration
