Hey Guys,

Attached is our Project Initiation Document, we would like to review it in our meeting tomorrow and by the
conclusion know of any required changes that will be required to sign off on. We tried to keep the document
fairly generic to allow our project to develop over the course of the semester, so any modifications/suggestions
are very appreciated. We are required to turn this in tomorrow in class at 12:30 and will need either signatures or
an email approving our project's plan. Let us know if you need anything else in the meantime, otherwise we're
looking forward to our meeting with you all tomorrow.

Thanks!
John

Hey guys,

Project initiation document looks good, nice work.

Best Regards,

Team - sorry for the last minute reply.

Section 1.2 - I would change G4 to say "Select target use cases based weighing doability and impact and implement"

Section 2.1 - say 1 week sprints so that every time we checkpoint we can asses and adjust if necessary

After addressing this minor feedback, I approve.

Michael
